	Note 1:	- The test we will use Environment: https://demowebshop.tricentis.com/ address		
	Note 2 :	# Preconditions: Typically, the Product Owner (PO) defines prerequisites (Pre Conditions) for user stories and incorporates these prerequisites into the user stories. However, in certain situations, the responsibility for determining these prerequisites may also lie with other team members.		
	Note 3:	# Negative Scenarios: Describes the user's need in cases where the application is used unexpectedly, or encounters errors during application usage. Thus, they contribute to providing users with a better experience. Considering negative scenarios or error situations during planning and test scenario creation is important. Preparation of test scenarios involves identifying and including negative scenarios. This process contributes to preventing or reducing potential issues by enhancing stability and reliability. In summary, negative scenarios play a vital role in ensuring the application's strength and effectiveness under various conditions.
